

Contents

1	Introduction	4
1.1	Benefits of Labtainers	4
1.2	Obtaining the Labtainer development kit	5
1.3	Content of this guide	5
2	Overview of the student environment and workflow	5
3	Creating new labs	7
3.1	Create the first lab computer	7
3.2	Testing the new lab	7
3.3	Multiple containers	9
4	Defining the lab execution environment	9
4.1	Docker files	9
4.2	Container definitions in start.config	10
4.3	Lab-specific files in the student's home directory	14
4.3.1	Large or numerous files in the home directory	14
4.4	Lab-specific system files	15
4.5	System services	15
4.6	Lab Text and Instructions for Students	16
4.7	Running programs in Virtual Terminals	17
4.8	Final lab environment fixup	17
4.9	Persistent storage	17
5	Parameterizing a lab	18
5.1	Parameterization configuration file syntax	18
5.2	Synchronizing startup and parameterization	20
5.3	Parameterizing start.config	20
5.4	Simple Parameterization for Checking Own-work	20
5.5	Debugging parameterizing	21
6	Automated assessment of student labs	21
6.1	Artifact files	21
6.1.1	Capturing stdin and stdout	21
6.1.2	Capturing program file output	22
6.1.3	Bash History	22
6.1.4	System logs	23
6.1.5	Capturing information about the environment	23
6.1.6	Capturing file access events	23
6.1.7	Generating results upon stopping the lab	24
6.1.8	Artifact archives	24
6.2	Artifact result values	25
6.2.1	Result field values	25
6.2.2	Converting artifact file formats	27
6.3	Evaluating results	28
6.3.1	Goal definitions	28
6.3.2	Distinguish between results generated before and after configuration changes	31
6.3.3	Replace answers with hashes	31
6.3.4	Assessment Report	32
